

- Open PuTTY:
 - **Host Name:** `192.168.137.2`
 - **Port:** `22`
 - **Connection type:** SSH
 - Click **Open**.
- Log in:
 - Username: `debian`
 - Password: `temppwd`.
- If it fails, note the error.

4. Troubleshoot SSH Issues

If the connection fails or VS Code still prompts for the wrong username:

- **Wrong Username Prompt:**
 - If VS Code still prompts for `acer@192.168.137.2`, the SSH config wasn't applied correctly.
 - Double-check `~/.ssh/config`:

text

Sao chép

```
Host arm
  HostName 192.168.137.2
  User debian
```

- Clear VS Code's SSH cache:
 - Press `Ctrl+Shift+P`, type **Remote-SSH: Kill VS Code Server on Host**, select it, and choose `arm`.
